The kitchen enriches my living

為生活增添豐富多彩的廚房

讓珍愛之物恆久

堅固、雅緻、潔淨
讓您愛不釋手

無須頻繁保養清潔
也能保有潔淨及愉悅的心情

The charm of enamel

01 - Tough & Clean

As dirt does not seep into the surface, a simple wipe is sufficient to clean the kitchen. Resistant to heat, shock, and scratch. Thereby its beauty will be kept longer.

污垢不會滲入，僅需擦拭便可保持潔淨。耐熱耐衝擊，不易損傷，因而能夠長久保持美觀。

02 - Healthy

Enamel, made of inorganic metal and glass, a human-friendly material containing no harmful organic substances.

琺瑯由無機物金屬與玻璃構成，不含任何有害物質，是一種對人體友善的材料。

03 - User-friendly

Magnets can provide a new storage space, allowing the wall to be decorated freely and customized for your convenience and preferences.

利用磁鐵的特性，依照自己的使用便利性及喜好，自由自在、隨心所欲地進行收納與裝飾的配置。

04 - Communication

It is possible to use oil based marking pens on the enamel panel. As their ink can be erased with a damp cloth, the wall can be used for a message board.

琺瑯材質可用油性筆書寫，且清水即能輕鬆擦拭乾淨，也可當作留言板使用。

Produced with high-grade enamel. Always clean and durable.

高品位琺瑯、經久耐用、歷久彌新、永保美觀!

Dirt resistance

耐髒污

As dirt does not seep into enamel, it is easy to clean. Oil stains around the kitchen can be wiped off quickly with a damp cloth. Seasoning or cleaners adhered to the surface will not cause discoloration or deterioration.

由於髒污不會滲入，因而保養簡便。廚房內的油污，清水便可輕輕鬆鬆擦拭去除。即使沾附上調味料和洗滌劑，也不必擔心變色、變質。

Heat resistance

耐熱

High-grade enamel is resistant to high temperatures in a place around a stove that is prone to becoming hot. Even if a fire is brought close, the surface is just soiled by soot without discoloration or deterioration.

高品位琺瑯亦適用於高溫環境的爐具周圍。即使被火燒灼，也僅僅留下煙塵，不會變色、變形。

Scratch / Shock resistance

耐衝擊，不易損傷

The surface will not easily become dented or scratched even if stuck with a pot or scrubbed with a stiff brush.

即使鍋具碰撞，或者用堅硬的板刷用力擦拭，也不容易出現損傷。

Safe material

安心的材質

No harmful substances such as formaldehyde that causes sick house syndrome are released. Everyone in the family can spend their time in the kitchen healthily.

不會產生可能導致病態建築症候群的甲醛等有害物質，創造確保家人健康生活的廚房空間。

Which components of the range hood are prone to oil stains? How prone is each such component to oil stains?

抽油煙機容易粘附油污的部位及比例

The process of creating high-grade enamel that strongly supports housework

家務的好幫手——高品位琺瑯的誕生過程

“Takara standard delivers good products.”

That is the mission of our factories.

We use our own technologies in each manufacturing process to produce strong and beautiful high-quality enamel.

“將優質產品交到用戶手中。”這是Takara standard的工廠的使命。

在每一步製造工序之中，充分發揮獨有技術，創造出堅固而美觀的高品位琺瑯。

1 Steel sheet processing 鋼板加工

Metal sheets, called steel sheets, are processed according to applications and welded by robots. For steel sheets with complicated shapes, it is difficult for robots to process them, so experienced workers will perform the work manually.

將被稱為鋼板的金屬板，根據用途進行加工，利用機械手進行焊接。複雜的形狀用機械手難以應對之時，由經驗豐富的匠人以手工作業進行加工。

2 Preprocessing 前處理

To enhance the adhesion between the steel sheets and glaze, the steel sheets are dipped in sulfuric acid to make the surfaces finely uneven, and nickel is processed for adhering it to the steel sheets, and so on.

為了提高鋼板與釉料的接合力，施以將鋼板浸泡在硫酸之中，使其表面出現細微的凹凸狀，以及使鎳附著在鋼板上等處理。

3 Glaze manufacturing 釉料製造

The constituents of the glaze, such as silica and feldspar, are formulated and mixed at an appropriate ratio. After the constituents are fused at 1200 to 1300°C, they are cooled and hardened to form frits. Clay, water, and various other chemicals are added to the frits, which are then finely milled to form muddy glaze.

將作為釉料原料的二氧化矽及長石等，以適當的比例進行調配及混合。以1200~1300度熔融之後，再使其冷卻凝固，形成玻璃質。然後加入黏土、水及各種藥品等，細細粉碎製成泥狀釉料。

What is the enamel made of?

琺瑯是這樣的材料。

Enamel is made by spraying glassy glaze on the surface of metals such as iron and aluminum and baking the metal at a high temperature.

向鐵、鋁等金屬表面，噴塗玻璃質的釉料，再以高溫燒結形成的產品稱為琺瑯。

4 Glaze application 上釉

The glaze is sprayed evenly and uniformly on the pretreated steel sheets. There are a variety of glaze application methods, such as “electrostatic coating”, “spray method”, and “dipping” that is directly dipped in the glaze. We select the best method, depending on the shape and size of the parts of the products.

向經過前處理的鋼板，均勻地附上釉料。根據部件的形狀和大小，分別採用“靜電塗裝”、“噴塗方式”、直接浸泡在釉料中的“浸漬塗佈”等各種方式。

5 Glaze baking 煨燒

The finely milled glaze is baked in a baking furnace at about 850°C. When melt, the glaze grows crystals and develops colors, forming enamel with a smooth glassy surface.

在約850度的煨燒爐中進行燒結。將研磨粉碎的玻璃融化，使玻璃內結晶成長，產生顏色，製造出具有光滑玻璃面的琺瑯。

6 Finish processing 完成

After baking, each part of the products is strictly inspected: enamel thickness checking and color difference measurement. After they are assembled and cut according to applications, they are finished. After inspection and packaging are complete, they are shipped out.

對燒成的各部件，進行琺瑯膜厚核對、色差計測等嚴格的檢查。根據用途進行拼接和切割，製成完成品。之後，經過檢驗和包裝後出貨。

Notices before purchasing

Be sure to read the following before purchasing.

[Stainless sink / Stainless steel worktop]

- Chlorine detergents (bleaches, pipe cleaners, etc.) may cause rust. Rinse thoroughly with water after use.
- Do not use chlorine type slime removers. They may cause rust of metal such as stainless steel or may deteriorate rubber or resin.
- Dragging along the surfaces of the sink/worktop the dishes, hard objects, the kitchen buckets or pots to which sand or mud are adhered, may cause scratches.
- Wipe off ingredients with high salt concentration (soy sauce, miso, etc.) adhering to the products. Leaving them adhered can cause rust.
- Do not leave wet kitchen knives or metal products (canned foods, iron products, or aluminum products, etc.) on the sink/worktop for a long time. Electrical reaction with aluminum, iron, and stainless steel may cause discoloration or rust.
- If rust or rust stains are severe, remove them by rubbing with a cream cleanser in a certain direction.
- Do not leave water splashes in the sink for a long time. Water scale may develop due to their calcium containing ingredients. Wipe them off with a cloth after use.

[Quartz stone worktop / Artificial marble worktop / Artificial marble sink]

- Since fry pans or oil pots become very hot after cooking, do not place them onto the worktop/sink directly after cooking. Cracks, discoloration, deformation (warpage) may occur. Be sure to use a pan coaster. (Note that some pan coasters may convey heat.)
- Dragging along the surfaces of the sink/worktop the dishes, hard objects, the kitchen buckets or pots to which sand or mud are adhered, may cause scratches.
- Some L-types or custom-ordered products may have joints on their worktops.

[Door / End panel / Cabinet]

- Despite the door, end panel, hood front panel and kitchen panel in the same color, variations in their colors or patterns may occur.
- Do not put a wet cloth, etc. on the door of the wooden kitchen or the end panel, or leave water drops or water spills as they are. The surface of wooden entrance may swell, or facing materials may warp, or surface materials may peel.
- Packings attached to the cabinet and door aim to relieve shock when the door is closed. They do not prevent intrusion of animals and pests.
- Enamel members has partially spots that look black such as hanging traces formed by hangers when the materials were hung or marks caused by placing the materials during manufacturing process, but having no problems on the quality.
- Since enamel members are potteries, small black spots caused on the manufacturing process may appear, but there are no problems on the quality.
- Some types of oil/water pens used to write on the products may be time-consuming to clean out depending on the time past after use. In that case, wipe them out with melamine sponges.

- The casters fitted to the storage wagon may leave their traces on some types of floors.

[Range hood]

- Since the range hood cannot inhale sufficient oil smoke due to the wind direction of air conditioning, the ventilation system etc.
- Some IH cooking heaters cannot inhale oil smoke when installed in an open environment with little ascending air current.

[Faucets / Water purifier /Alkali ion water generator]

- Since the products are used in general households, use them only with tap water. Using hot spring water or well water (groundwater) may cause product failures due to generation of scales (chlorine component), etc.
- Check the capability of the water heaters carefully before installation. Too small outflow of water from the shower will prevent comfortable use of shower. Check the minimum necessary water pressure and maximum water pressure before using.
- Because the combination faucets undergo a large water flow resistance, the amount of hot water may become insufficient, or hot and cold water cannot be mixed smoothly, depending on the type and water pressure conditions of waterers.
- In cold climates, use the products designed for cold districts. (However, they do not prevent from freezing. If freezing may occur, perform drain work in accordance with the instruction manual.)
- The water generator is not designed for cold districts, do not install it in places where freezing may occur.
- For safe and comfortable use of the water faucet fittings, read the instruction manual well after purchasing and perform the inspection and parts replacement regularly.
- ※ Inspect the sink area for water leakage regularly more than twice a year.
- ※ Inspect the invisible part (especially the inside of cabinet) closely.
- ※ Since the packing and the shower hose are consumable/wear parts, replace them periodically.
- Install the faucet with water purification function in a place where water runs once every two-three days.
- ※ The faucet, if not used for more than two days, must be passed purified water for more than one minute before use.
- ※ Retained water without residual chlorines is susceptible to bacterial growth. This may impair physical conditions.
- The water outflow openings of faucet fittings are each placed at different positions depending on the combination of faucet and sink. Contact our office for details.

購買前須知

購買前請務必詳閱。

[不鏽鋼製水槽、不鏽鋼製檯面]

- 含氯清潔劑 (漂白水、水管疏通劑等) 可能會導致生鏽。使用之後請用清水充分沖洗。
- 請勿使用含氯的去汙劑, 以免不鏽鋼等金屬部分生鏽、橡膠或塑膠劣化。
- 拖拽食器或硬物、沾有泥沙的水盆或鍋具可能會造成刮痕。
- 殘留含鹽分較多的食品 (醬油、味噌等) 會導致生鏽, 請擦拭乾淨。
- 請勿長時間放置沾濕的菜刀或罐頭類等的金屬產品 (鐵製品、錫製品等)。錫、鐵和不鏽鋼會產生電化腐蝕導致變色或生鏽。
- 接觸銹或生鏽嚴重時, 請用去汙劑同方向研磨。
- 長時間放置灑落在水槽中的水, 會因碳酸鈣導致附著水垢。水槽使用後請用布擦拭水滴。

[石英石檯面、人造大理石檯面、人造大理石水槽]

- 烹飪後的平底鍋或油鍋等因為溫度非常高, 所以請勿直接放置。否則會導致出現裂痕、變色、變形 (翹起)。請務必鋪上鍋墊等。(依鍋墊材質, 可能會導熱, 請小心)。
- 拖拽食器或硬物、沾有泥沙的水盆或鍋具可能會造成刮痕。
- L型廚房, 台面可能會看到接縫。

[門板、側板、櫃體]

- 門板和側板、抽油煙機罩前面板及廚房用壁板等即使相同色系, 顏色及花紋也可能會有所差距。
- 木製廚房門板或側板處請勿掛置毛巾等, 也不要置水滴或溢出的水。否則會導致木切口突起、木材翹起、表面木材剝落。
- 櫃體及門板附有的膠條是為了緩和開門時的衝擊。並非防止動物或害蟲的入侵。
- 珐瑯部件在燒製時, 會留有暗黑的吊鉤吊痕及置痕等, 但不存在品質問題。
- 珐瑯部件是燒製而成, 所以在製程中可能會產生小黑點, 但不存在品質問題。
- 使用油性筆、水性筆時, 因筆的種類或放置時間, 可能需要花費時間擦拭乾淨。此時, 請使用三聚氫胺海綿去除。
- 收納櫃附有滾輪, 所以依地板種類, 可能會有滾輪痕跡留下。

[抽油煙機]

- 依空調等的風向及換氣系統等, 可能會導致不易吸入油煙。
- IH調理爐因為不太會產生上升氣流等, 所以開放空間有可能較難吸入油煙。

[水龍頭、淨水器、鹼性離子整水器]

- 因為是用於一般家庭, 所以僅能使用自來水。若要使用溫泉水或井水(地下水)時, 因會產生水垢(石灰質)而導致產品發生故障。
- 安裝時請充分確認熱水器的規格。淋浴的出水量可能會變少, 導致無法暢快地使用淋浴。請確認必要的最低水壓及最高水壓後再使用。
- 冷熱混合水龍頭的通水阻力較大, 所以依熱水機器的種類及水壓條件, 可能無法獲得充分的熱水量, 或無法順利混合冷熱水。
- 寒冷地區請使用寒冷地區規格的產品(寒冷地區規格並非防止結凍。若擔心結凍, 則請按照操作說明書, 進行排水作業)。
- 整水器並非是寒冷地區規格, 所以請勿設置在可能會結凍的地方。
- 為了使水龍頭金屬配件能夠長期安全而舒適地使用, 購買後請詳細閱讀操作說明書, 進行定期點檢及更換零件。
- ※關於定期點檢, 請每年兩次以上點檢用水處是否漏水。
- ※請特別注意看不見的部份(櫃內)。
- ※因為膠條及淋浴軟管等為會磨損劣化的零件, 所以請定期更換。
- 有淨水功能的水龍頭, 請設置於兩三天可通水一次的地方。
- ※兩天以上沒有使用時, 請放流1分鐘以上之後再使用淨水。
- ※殘留水因去除了所殘留的氯, 所以很容易繁殖細菌, 恐會損害健康。
- 關於水龍頭金屬配件的出水口位置, 依水龍頭與水槽的組合而會有所不同。詳細位置請洽詢本公司營業處。
